DETAILED ACTION

As claims 17-20 currently depend from method claims 13-16, the examiner is interpreting claims 17-21 as method claims with an erroneous preamble.

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-12, drawn to a calcium carbonate product / pigment.

Group II, claim(s) 13-20, and 22-24, drawn to a method of producing a coated paper.

Group III, claim(s) 21, drawn to a coated paper product.

2. The inventions listed as Groups I, II, and III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Groups I, II, and III share first and second calcium carbonate particle size distributions possessing first and second means having a difference of about 0.1 to 0.2 microns, and in weight ratios from about 50:50 to about 80:20; this technical feature is taught by Haskins et al. (US patent 5,861,209) (col 4 – col 5 line 11, col 13 line 28 - col 14 line 3; see, for example, wherein 45 to 55 % of a mixture of precipitated calcium carbonate particles have a mean diameter between 0.4 micron and 1 micron, and wherein about 25 to 35% of the particles have a mean diameter between 1 micron and 3 microns; provided with these ratios and ranges, it would have been obvious to one of ordinary skill in the art at the time of invention to have selected mean particle diameter from the first group as 0.9 microns and a mean particle diameter from the second group as 1.1 microns as in the case

Art Unit: 1792

where the claimed ranges “overlap or lie inside ranges disclosed by the prior art” a *prima facie* case of obviousness exists. In *re Wertheim*, 541 F.2d 257, 191 USPQ 90 (CCPA 1976)) therefore the technical feature shared by the three groups is a “common technical feature”, not a special technical feature, generating a lack of unity *a posteriori*.

3. A telephone call was made to Michael Herman on 2/27/08 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
